

Chemical Warfare

Ervin and Vic Barocas

The Barocas Brothers are fighting mad!! For years we have been ignoring ridiculous product claims made by a few of our so-called competitors. We think that it is time we cleared the air and educated you as to the potential danger in using and handling chemicals.

FACT: American Niagara employs two full-time chemists...just ask your present supplier...Do you even employ one full-time chemist? (This is extremely important due to potential toxicity in blending and handling chlorinated solvents as well as keeping you informed and up-to-date on product safety and changes in the law.)

FACT: American Niagara has never blended any flammable bulk spot removers (they can cause an explosion when sprayed through a textile cleaning gun). We know for a fact that some of our competitors are blending these potential time bombs and we think you need to be aware of it.

FACT: American Niagara operates not one but two manufacturing and lab facilities. We presently have over 80,000 square feet in Atlanta alone. So when we say that we have a "spotting lab" to test your fabric soils...we really mean that we have a "spotting lab."

FACT: Even though ANC might be larger than our competitors, don't be a bit surprised when you call our toll-free spot line to place an order or ask a question, because chances are that a Barocas will take your order. When you purchase from ANC you are making a statement that you are concerned about the safety and well-being of your valued employees and fellow workers.

Our dad used to tell us: "Boys, you would not want a mechanic performing brain surgery on a family member, would you?" And we responded: "Which family member?"

Cleaning Guns
